Published <i>With international search report.</i> (88) Date of publication of the international search report: 28 September 2000 (28.09.00)
(54) Title: BLOCKING FACTOR B TO TREAT COMPLEMENT-MEDIATED IMMUNE DISEASE (57) Abstract <p>The present invention provides a method of treating or preventing complement-mediated immune disease in a subject, comprising administering to the subject an inhibitor of synthesis or activity of Factor B, whereby the inhibition of synthesis or activity of Factor B treats or prevents the immune disease. Also provided are an antibody to Factor B, an anti-sense oligonucleotide which blocks the mRNA which encodes Factor B and a peptide which competitively binds C3, the receptor for Factor B. The present invention further provides a vector comprising the nucleic acid of this invention and a cell comprising the vector. Also provided is a method of administering to a subject in a pharmaceutically acceptable carrier an antibody, oligonucleotide, peptide and vector of the invention. The present invention further provides a method of determining the predisposition of a subject to complement-mediated immune disease and a method of determining efficacy of treatment in and prognosis of a subject with complement-mediated immune disease. Further, the present invention also provides a mutant transgenic mouse.</p>

PCT/US 99/23485

A. CLASSIFICATION OF SUBJECT MATTER

IPC 7 A61K39/395 C12N15/11 A61K38/17 C12N15/63 G01N33/68
C07K14/47 A01K67/027 A61P37/00

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 C07K C12N

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

BIOSIS, EMBASE, WPI Data, PAJ

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	C. CLARDY ET AL.: "In vitro inhibition of complement activation using a monoclonal antibody (MoAb) directed against human factor B (Fb)." PEDIATRIC RESEARCH, vol. 31, no. 4 part 2, 1992, page 331A XP000907515 Basel, Switzerland abstract 1969 ----- -/--	1-8

☒ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

- "T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- "X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- "Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- "&" document member of the same patent family

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1 (partially) and 2-8 (completely)

Method of treating/preventing factor B-mediated immune disease in a subject by inhibiting the activity/synthesis of factor B, by administration of an antibody to factor B. Also composition comprising said antibody

2. Claims: 1 (partially) and 9-13 (completely)

Method of treating/preventing factor B-mediated immune disease in a subject by inhibiting the activity/synthesis of factor B, by administration of an antisense oligonucleotide. Also a vector comprising said oligonucleotide and a composition comprising said vector

3. Claim : 1 (partially) and 14 and 15 (both completely)

Method of treating/preventing factor B-mediated immune disease in a subject by inhibiting the activity/synthesis of factor B, comprising administering a peptide that mimics the binding properties of factor B. Also a composition comprising said peptide.

4. Claims: 16, 17 and 20

Methods of diagnosis/prognosis of factor B-mediated disease and the effect of its treatment by determination of factor B.

5. Claim : 18 and 19

Transgenic mouse comprising a mutation in the Fas and factor B genes
